◆ **XWX AI Chat Exporter** is a browser extension (primarily for Google Chrome) designed to help you save and archive your conversations from various AI platforms. It solves the common frustration of trying to copy-paste long chats, which often results in broken formatting, missing code blocks, or messy layouts.

## 🚀 Key Features

- **Multi-Platform Support:** It works across the most popular AI services, including **Gemini**, **ChatGPT**, **Claude**, **DeepSeek**, and **Grok** (X/Twitter).
- **Multiple Export Formats:** You can save your chats as:
  - **Markdown (.md):** Ideal for note-taking apps like Notion or Obsidian.
  - **PDF:** Cleanly formatted for professional sharing or printing.
  - **DOCX:** For use in Microsoft Word.
  - **JSON/TXT:** For raw data or simple text backups.
- **Selection Mode:** Instead of exporting the entire (sometimes very long) history, you can click specific "chat bubbles" to export only the parts of the conversation you need.
- **Formatting Preservation:** It is specifically designed to handle complex elements like **code blocks** (with syntax highlighting), **tables**, and **mathematical formulas** (LaTeX).

## 💰 Pricing Structure

- **Free Version:** Unlimited exports for Markdown, Word, and Text formats. It usually includes a limited number of PDF exports per day (typically around 3).
- **Pro Version:** Removes the "Powered by" watermark, offers unlimited PDF exports, and includes advanced customization options.

## Privacy

The developers claim a "local-first" privacy approach. Most formats are generated entirely within your browser so your data never leaves your computer. For PDF generation, data may be processed on a server but is generally not stored or analyzed.

**Would you like me to find the direct link to the Chrome Web Store for you, or do you need help with how to use it for a specific platform like Claude or Gemini?**

Provide 10 common advanced physics or mathematical formulas

◆ Here are 10 of the most significant advanced formulas across physics and mathematics. These equations are the pillars of their respective fields, ranging from the geometry of the universe to the behavior of the smallest subatomic particles.

### ❖ **Physics Formulas**

**1. Einstein's Field Equations (General Relativity)** This describes how matter and energy curve spacetime, which we perceive as gravity.

$$G_{\mu\nu} + \Lambda g_{\mu\nu} = \frac{8\pi G}{c^4} T_{\mu\nu}$$

**2. The Schrödinger Equation (Quantum Mechanics)** The fundamental equation for non-relativistic quantum mechanics, predicting how the quantum state of a physical system changes over time.

$$i\hbar \frac{\partial}{\partial t} \Psi(\mathbf{r}, t) = \hat{H} \Psi(\mathbf{r}, t)$$

**3. Maxwell's Equations (Electromagnetism)** While usually shown as four separate equations, they can be expressed elegantly in the language of differential forms. This specific one represents **Faraday's Law**:

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

**4. The Boltzmann Entropy Formula (Statistical Mechanics)** This connects the microscopic details of a system (microstates) to its macroscopic property of entropy.

$$S = k_B \ln \Omega$$

**5. The Dirac Equation (Particle Physics)** This equation describes the behavior of fermions (like electrons) and famously predicted the existence of antimatter by combining quantum mechanics and special relativity.

$$(i\gamma^\mu \partial_\mu - m)\psi = 0$$

## Mathematical Formulas

**6. Euler's Identity (Complex Analysis)** Often called "the most beautiful theorem in mathematics," it links five of the most fundamental mathematical constants ( $e, i, \pi, 1, 0$ ) in a single simple statement.

$$e^{i\pi} + 1 = 0$$

**7. The Fourier Transform (Analysis)** This allows a signal or function to be decomposed into its constituent frequencies, a process essential for everything from Wi-Fi to MRI scans.

$$\hat{f}(\xi) = \int_{-\infty}^{\infty} f(x) e^{-2\pi i x \xi} dx$$

**8. The Navier-Stokes Equations (Fluid Dynamics)** These equations describe the motion of fluid substances. They are so complex that a \$1 million "Millennium Prize" exists for anyone who can prove whether smooth solutions always exist.

$$\rho \left( \frac{\partial \mathbf{u}}{\partial t} + \mathbf{u} \cdot \nabla \mathbf{u} \right) = -\nabla p + \mu \nabla^2 \mathbf{u} + \mathbf{f}$$

**9. The Riemann Zeta Function (Number Theory)** Central to the distribution of prime numbers, the zeroes of this function are the subject of the most famous unsolved problem in math: the Riemann Hypothesis.

$$\zeta(s) = \sum_{n=1}^{\infty} \frac{1}{n^s}$$

**10. Gauss-Bonnet Theorem (Differential Geometry)** This connects the local geometry (curvature) of a surface to its global shape (topology/genus).

$$\int_M K \, dA + \int_{\partial M} k_g \, ds = 2\pi\chi(M)$$

Would you like me to break down the variables for one of these in particular, or perhaps provide a Python script to visualize the behavior of one of these equations?

Translate the sentence "Hello, welcome to use this tool" into the 10 most widely spoken languages. For each line, add some emoji

◆ Here is the translation of "**Hello, welcome to use this tool**" into the 10 most widely spoken languages (by total speakers as of 2026), along with some helpful emojis:

1. **English:** Hello, welcome to use this tool  
2. **Mandarin Chinese:** 您好，欢迎使用此工具  
3. **Hindi:** नमस्ते, इस टूल का उपयोग करने के लिए आपका स्वागत है  
4. **Spanish:** Hola, bienvenido a usar esta herramienta  
5. **French:** Bonjour, bienvenue à utiliser cet outil  
6. **Modern Standard Arabic:** مرحباً، أهلاً بك لاستخدام هذه الأداة  
7. **Bengali:** হ্যালো, এই টুলটি ব্যবহার করার জন্য আপনাকে স্বাগতম  
8. **Portuguese:** Olá, bem-vindo ao uso desta ferramenta  
9. **Russian:** Здравствуйте, добро пожаловать в этот инструмент  
10. **Urdu:** یہی، اس ٹول کو استعمال کرنے میں خوش آمدید  

Would you like me to translate this into any other specific regional languages, or perhaps create a styled Markdown table for these translations?
